

Veeam Backup Health Check

ultima

With new compliance regulations being introduced businesses are required to hold more data and backup more frequently. Additionally, organisations are demanding lower RPOs and RTOs, and as a result application backups are being pushed to their limits. This means that backup and disaster recovery platforms are running at maximum capacity which is far from ideal.

Our health check delivers a report which highlights health issues, risks and recommendations for fine tuning and optimisation. With our help, you will be equipped to build a compliant, efficient and fast backup platform.

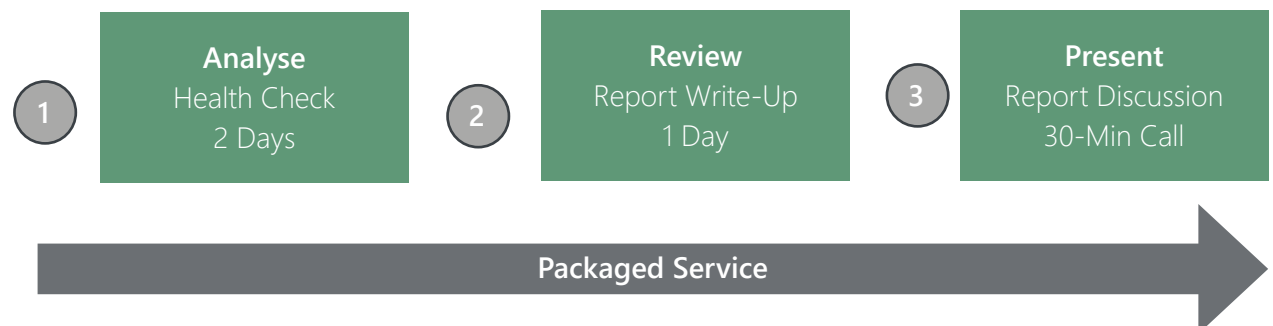

Scope

We will deliver a document which checks the current operating model against best practices to protect business systems and recommend options which deliver greater value. This engagement includes:

- Onsite assessment of the Veeam Backup environment
- Systems and application backup job
- Business impact analysis

Engagement Approach

We will arrange a pre-sales call with a consultant to validate the package is fit for your needs. If more effort is required then additional services will also be discussed. Then, the following three steps will be carried out by our experienced technologist:

VEEAM GOLD
pro partner

Veeam Gold Pro Partner

As a Veeam Gold Pro Partner, we have an extensive knowledge of Veeam, including how it integrates with differing software and hardware platforms.

With our knowledge of deploying on-premises and hybrid data centre solutions for our customers, we can provide you with vendor best practice as well as years of experience.

Veeam Backup Health Check Service Summary

Key Benefits

- Review the backup objectives
- Identify gaps in the backup plan
- Provide guidance and recommendations
- Document current IT services and DR protection strategies

Prerequisites

- Speak to an Ultima consultant for sizing
- Provide access to Veeam and the hypervisor environment
- Typically the service is suitable for environments with < 50 virtual machines and < 3 sites

Key Deliverables

- Health check report
- Best practice validation
- Technical and practical recommendations for data protection

Typical Duration 3 Days*

*Based on an environment < 50 virtual machines and < 3 sites. Larger environments or extra sites can be scaled with more effort.
